

## Digitalisation study

### Your challenge

You want to drive the digitization of your business and create a paperless, more efficient office? However, you are unsure whether and what improvement potential you can realize in the processes? You would like to see what an individual digitalisation scenario for your application looks like and what scope of services must be covered by a digitalisation solution? Then we would be happy to support you in the analysis of requirements and the implementation of a digitalisation study.

### Our services

- Systematic analysis of your current processes and common definition of the target state
- Structured recording and documenting of your requirements in the form of specifications according to VDI/VDE 3694
- Comprehensive research digitalisation solutions (e.g. RFID, AR technology, internet of things)
- Combination of technologies for digitalisation scenarios tailored to the requirements
- Derivation and documentation of improvement potential of digitalisation scenarios
- Documentation of results in the form of fact sheets of digitalisation scenarios

### Our commitment to quality

- Systematic approach coordinated with your input
- Structured documentation of definition of goals and requirements as well as opportunities for improvement of digitalisation scenarios
- Professional project management as well as methods and facilitation skills

### Your benefits

- Independent and objective assessment of actual processes
- Gaining knowledge about potential improvements through systematic analysis of your processes
- Generating an understandable decision-making basis for the introduction of a digitalisation solution
- Inclusion of new digitalisation technologies and the current state of research and technology
- No committing of internal resources
